Interaction Design

3/19/20

Assignment: Make an LED do something cool!

To make it work you:

1. When it is in its normal state in a dimly lit room it blinks normally

2. When you put a light on the sensor it lights up the LED

3. When you cover the sensor it turns off the led

Audience: This assignments audience was just for our class

Interaction Diagram: N/A

Reflections: I thought that this was fun an frustrating at the same time… However I am happy that I finally got it to work!
